The BBX (Combination Preskimmer and Bubble Eliminator)

The BBX incorporates a preskimmer and bubble eliminator in a single, easy to install unit.

To place the BBX into operation:

1. Open the packaging carefully and inspect the BBX for any damage. The unit should come with the BBX body, preskimmer sponge (small), and bubble eliminator sponge (large) . If you notice any damage, please contact your dealer immediately.
2. Place the powerhead into the preskimmer portion of the BBX. Place the other chamber over the outlet of your Bak-Pak™2 and raise the BBX until the top of the box is above the water level. *You may find that it is necessary to adjust the direction of the outlet elbow in order to properly fit the BBX. (The BBX fits snugly over the outlet of the Bak-Pak™2)*
3. Adjust the BBX so that the lowest side wall of the preskimmer is about a half of an inch below the surface of the water. The positioning screw should be tightened gently to hold the BBX in place.
4. Routine maintenance is necessary for the optimal performance of the BBX. Remove and clean the sponges at least once a week and replace the sponges when they becomes clogged or worn. Do not use any detergents on the sponges, or the Bubble Eliminator body.
