The NBT Bak-Pak™ 2 Bubble Eliminator

The NBT Bubble Eliminator removes both large and small bubbles that may enter the aquarium due to water quality and turbulence.

To place the Bubble Eliminator into operation:

1. Open the packaging carefully and inspect the unit for any damage. The unit should come with the Bubble Eliminator body and sponge. If you notice any damage, please contact your dealer immediately.
2. The Bubble Eliminator fits snugly over the outlet of the Bak-Pak™2. Place the box over the outlet and raise it up until the top of the box is above the water level.
3. Routine maintenance is necessary for the optimal performance of the Bubble Eliminator. Remove and clean the sponge at least once a week and replace the sponge when it becomes clogged or worn. Do not use any detergents on the sponge, or the Bubble Eliminator body. Simply rinsing it in fresh or salt water is all that is
