

Bak-Pak™ Preskimmer Instructions

The Bak-Pak™ Preskimmer is designed to make the Cyclone Bak-Pak™ even more efficient. The Preskimmer fits into the tank and skims the surface where the highest proportion of wastes accumulate.

Simply fit the unit around the Rejuvenation Powerhead so that the positioning screw is facing out. The Preskimmer box should be adjusted so that the lowest side wall is about a half of an inch below the surface of the water. The red positioning screw should be tightened gently to hold the Preskimmer in place. The filter sponge should be placed in the area where the water enters to collect detritus and keep curious fish out of the Preskimmer.
